

Melting/Refining Equipment

Please use a separate line to list each type and size combination of furnace(s). For example, two five ton electric arc furnaces used for basic melting would be listed on one line, however a five ton induction furnace and a three ton induction furnace would be listed on two separate lines. Listing melting equipment this way makes the information in the Directory easier to understand and helps SFSA develop a clearer picture of the melting capability of the industry.

Check box to indicate type of melting/refining equipment <i>Please use one line per each type or size of furnace</i>				Number of Units	Size(s) (tons)	Acid / Basic / Neutral

We do not manufacture steel castings; why did we get this form?

The Directory Information form has been sent to your company because our records indicate that you manufacture steel castings. If this is incorrect and your location does not produce steel castings, please check the box near the top of the first page, fill out the company name and address portion of the form and return the form to us so that we can remove your company from our records.
